

TROY PRODUCTS UNIVERSAL CONSOLE CHOICES FOR DODGE CHARGERS

Choose Models That Transfer To Different Vehicles!

Troy Products offers a variety of universal console models for use in a Dodge Charger. This universal approach also requires a Charger-specific floor plate, AC-CH11-MNT. These consoles can be transferred to different bucket-seat, column-shift vehicles.

Many TROY consoles will look great in your Charger when you use our Charger-specific floor plate. Remove the OEM police-package floor plate and install the TROY low-profile two-piece solution (dash plate and floor base). Then, install the console of your choice.

Popular console models used in Chargers include the following:

CC-A-S12. Features flat deck (for mounting computers) and 12" of continuous face plate mounting. It is a two-piece console, the top of which adjusts in height to accommodate varying equipment lengths. An optional 8" add-on console, CC-LP-8, (not shown) is ideal for mounting accessories (internal beverage holder, storage, etc.).

CC-BPD-15. Has flat deck for computers, a 9" sloped area and a 6" level area. Has a low profile (6.5" tall at dash) and the flat 6" area is a great place for an internal beverage holder or storage.

CC-LASD-15. Has flat deck for computers, a 7" slope and an 8" level area. It is 9" tall at dashboard end. Console sides are punched with speaker grill holes for internal mounting of speakers.

CC-HCSO-9. Has flat deck for computers and a 9" continuous slope for face plates. Also punched with speaker holes on sides.

CC-MC16-S. Has an 8" slope and 8" level area. The console is 9" tall at the dashboard end.

CC-PCFX14. Has a 3" slope (one dash-mount radio) and 11" on the level area. Has flat deck at dashboard end for mounting computers.
