

TROY PRODUCTS CONSOLES FOR NEW FORD INTERCEPTOR UTILITY VEHICLE

NEW 2012 CONSOLE

CC-MC-18 console with CM-UMNT-SA-M810 in new Ford U.V.

TROY PRODUCTS has a number of consoles and computer mounting solutions to outfit the new Ford Police Interceptor Utility Vehicle.

The photo to the left shows an 18" MC console in the U.V. Troy's MC console line is available in many lengths to accommodate a variety of equipment installation needs.

The MC console features a sloped front that will hold 7" of face plates and the level area holds from 7" up to 23" of additional face plates.

On this particular installation, the customer chose the Troy U-mount with locking swing arm to mount the Motorola monitor and keyboard.

A number of off-the-shelf consoles work great in the new UV; however, TROY has designed a UV-specific console made to match the dashboard contours for a custom look. (See photo to right.)

The console model is CC-FDUV-14. It butts against the dashboard and bolts directly to a Troy floor plate, AC-FDUV-MNT, designed to replace the OEM one. The Troy floor plate features slotted holes to facilitate console installation. This new UV console is offered in additional lengths.

SYNC OPTION

If you buy the "Sync" option and the console you choose blocks access to the USB/auxiliary port dashboard module, it can be re-located to the console via face plate or to the console itself.

Call customer service to discuss all of your choices!
