

RX2700™ CC MC LIGHTBAR

Code 3 proudly introduces the RX 2700™ CC with **MultiColor (MC) Capability**. This dual color lightbar uses the latest LED dual

color technology to provide intense color that is 20% brighter than any competitive MultiColor technology (see chart below).

Benefits

- ◆ Two full signals out of one lighthead — No more compromising signal strength and size by splitting a LED lighthead to get two colors
- ◆ Turn a red/blue lighthead into a white takedown. This provides increased takedown lighting at no additional cost or loss of emergency warning positions.
- ◆ When MultiColor is used in the rear, red/blue modules can change directly to a full size NarrowStik™ — No longer give up emergency warning colors to have an amber Narrowstik also. Now you can have both
- ◆ Greater color and flash combinations now possible — Creates more flash patterns and color activity to alert motorists of your presence
